

Rhoss Winpack Eco EXP Provides Efficiency All Year Round

Rhoss presents the new multipurpose Winpack Eco EXP product range. The use of latest-generation scroll compressors, optimized for R454B low-GWP refrigerant, is a concrete solution addressing evolving HVAC market requirements and new European regulations.

Winpack is an environmentally sustainable range of air-cooled chillers and heat pumps with axial fans from 100 to 340 kW, developed to meet new energy efficiency standards and to offer very low noise levels.

EXP technology, the multipurpose ecological system designed by Rhoss, is available in several air- and water-cooled ranges, and with compressors featuring inverter tech-

nology. Several solutions address cold and hot water demand simultaneously or independently, with a single unit, all year round. It is designed for 2-, 4-, and 6-pipe systems, reaching nominal efficiency levels above 8.

Efficiency and flexibility provide versatility, guaranteeing optimal energy efficiency performance.
